Portable Medical Record

Keeps continuity when changing hospital. Leave personal fields blank for the family to complete.

Diagnosis

Type of renal tubular acidosis (RTA)

Genetic diagnosis

Baseline pH

HCO₃

K

Medications / prescribed doses

Allergies

Treating hospitals

Treating doctors

Major history

Last 12 visits

Date	pH	HCO ₃	K	Na	Wt	Ht	Dose	Appetite	Activity	Const.	Fracture/event	ER	Decision

Information that should not be lost when changing hospital: RTA type, baseline values, current prescribed doses, allergies, specialty contacts, and a brief fracture/ER summary.

Educational and organizational only. Does not diagnose, set doses, or replace a clinician. What you notice at home is not the same as what is in the medical record, and not the same as what the doctor decides.
